

## Digestive System Model

Your assignment is to create a model of one of the digestive systems we reviewed in class. You will draw out of a hat to determine which digestive system you will create. The assignment is due on **Tuesday, Jan 4, 2012**. Your model will be graded on accuracy and completeness, detail, neatness and creativity. This assignment is worth 100 points. You are to use the pictures we colored and labeled in class as your reference. Each different color on your labeled picture needs to have a representation on your model. These models are expected to be 3-dimensional.

### **Tips**

Look at the models I show in class and the grades they received. Color and texture are important aspects, so find things that either represent the function or the actual color/texture of the organ.

Models made from clay will receive a grade in the B range (that is the easiest and most common method). Models made from cake, rice crispy treat, etc will also receive a grade in the B range (it is nearly impossible to show detail with these methods).

Type up a list of each organ and how your model represented it as soon as you finish so when you explain it to me you know exactly what you did and how you did it.

Type your labels and cut them out and attach to your project to earn extra neatness points.
